**** Joomla! 1.5.0 Beta should NOT to be used for `live` or `production` sites. ****

Joomla! is a free open source framework and content publishing system designed for quickly creating highly interactive multi-language Web sites, online communities, media portals, blogs and eCommerce applications.

Joomla! provides an easy-to-use graphical user interface that simplifies the management and publishing of large volumes of content including HTML, documents, and rich media. Joomla! is used by organisations of all sizes for Public Websites, Intranets and Extranets and is supported by a community of thousands of users. With fully documented library of developer resources, Joomla! allows the customisation of every aspect of a Website including presentation, layout, administration and rapid integration with third-party applications.

Joomla! has a rich heritage and has been crowned CMS king many times over. Now with more power under the hood, Joomla! is shifting gear and provides developer power while making the user experience all the more friendly. For those who always wanted increased extensibility, Joomla! 1.5 can make this happen.
